MBS	14,000kg	Material	Durakorr™ synthetic
Length	550mm	Weight	200g
Diameter	12mm		

EXTRA LONG SOFT SHACKLE

RRP \$59

MBS	10,000kg	Material	Durakorr™ synthetic
Length	1m	Weight	200g
Diameter	8-18mm		

**SAFE & SMOOTH
RECOVERY**

Our range of ropes, shackles, and straps are constructed using heavy-duty synthetics rather than steel. These materials offer incredible durability and great protection from weather and wear.

Engineered to elongate up to 30% in length, soft recovery gear will allow for a smoother recovery, reducing the risk of damaging the vehicles involved in the recovery. On top of this, cases of failure or misuse resulting in breakage, are less likely to be lethal or cause major injury due to the lack of heavy metal objects used in the recovery.

RECOVERY GEAR KITS & BAGS

NEW

RECOVERY KITS

TOWBAR HITCH RECOVERY KIT

RRP \$129

WLL	5,000kg	Weight	1kg
Hitch Receiver	50x50m	Material	Aluminium Alloy

- ✓ FITS SPARE TYRES UP TO 40"

RECOVERY KIT BAG

RRP \$139

- ✓ 40L CAPACITY
- ✓ DURABLE 600D POLYESTER
- ✓ COMPARTMENTS FOR ALL YOUR GEAR

WHAT IS MBS? MINIMUM BREAKING STRENGTH

The amount of force that can be applied to your recovery equipment before it starts to tear, rip, or break. The MBS value of your recovery equipment should be at least 2-3 times the gross weight of the vehicle being recovered. *Our MBS figures are certified by one of Australia's leading accredited NATA labs.*

WHAT IS WLL? WORKING LOAD LIMIT

The maximum load that can be applied to your equipment. It's important to note that while our Recovery Ring and Hitch Block WLL figures are generally very high, the ropes and shackles they are designed to be used with have a lower breaking weight. This is done intentionally for the safety of the user.

HARDKORR

RECOVERY GEAR LARGE RECOVERY KIT

NEW

CONTENTS

- 1x RECOVERY RING
- 1x ROPE DAMPENER
- 1x WORK GLOVES SET

RRP \$849

SAFER FOR YOU BETTER FOR YOUR VEHICLE

KINETIC ROPES VS SNATCH STRAPS

Used in the same manner as a snatch strap, Kinetic Ropes are the newer recovery alternative that's quickly become a staple to the modern 4x4 enthusiast's kit. *Made from 100% synthetic, kinetic ropes offer 30% elongation (as opposed to the ~20% on snatch straps), higher abrasion resistance, and overall are more durable and stronger.* If you're after a bit of kit that'll be a mainstay in your recovery kit for a long while, Kinetic Ropes are the way to go.
