PRODUCT OVERVIEW

DIMMING OPERATION

The three white light modes can be brightened and dimmed .

1. Cycle through the light modes by pressing the power button.
2. Press and hold the power button when a mode has been chosen to brighten the beam.
3. Release the button when the beam is at the desired brightness. The light will flash when it has reached maximum brightness.
4. Dimming the light operates in the same way. Press and hold the power button to dim. The light will flash at minimum brightness.

SENSOR OPERATION

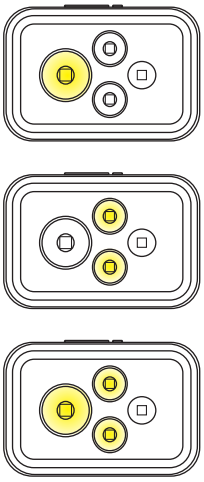

1. Select the desired light output mode by cycling through the options with the power button.
2. Press the RGB/sensor button to activate the sensor. The blue LED will flash to indicate activation.
3. The head torch can now be turned on/off by waving your hand over the sensor. It can detect up to 15cm away, so your hand must be within this distance.
4. To turn off the sensor, press the RGB/sensor button.

LIGHT OUTPUT CYCLE

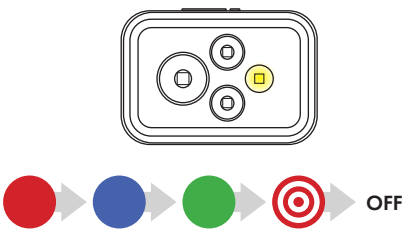

Press the power button to cycle through each light mode.

1. High spot (15-500lm)
2. Low flood (4-400lm)
3. Combo (25-700lm)

OFF

Press the RGB/sensor button to cycle through each colour.
